1. Production of Electric Current - Latvia - 1938

By Hydraulic plants	7,872,000 Kw H
By Thermal plants	225,861,000 Kw H
Total	233,733,000 Kw H

There were 68 electric power stations and 494 industrial plants which produced power for themselves - total 562 units

Produced in all Latvia:

68 units	162,652,000 Kw H	- 70%
494 units	71,081,000 Kw H	- 30%

The Riga thermal plant alone produced 124,517,000 Kw H or 53% of all electricity produced in Latvia. From 1939 to 1949 it was supplemented by the Kegums power station on the River Daugava near Riga.

This electricity was produced in:

Riga - city	75 units [plants]	144,474,000 Kw H	- 62%
Vidzeme (district)	181 units	46,141,000 Kw H	- 20%
(paper factories)			
Kurzeme (district)			
[Courland]	123 units	27,638,000 Kw H	- 12%
Zemgale (district)	98 units	8,165,000 Kw H	- 3%
Latgale (district)	85 units	7,315,000 Kw H	- 3%
	562 units	233,733,000 Kw H	100%

2. Industrial Cross-Section of the Electricity Produced - Latvia - 1938

	Units	1,000 Kw H Produced
Mines - Quarries	5	106
Ceramics	7	5,449
Metal Industry	13	335

The 68 electric power stations produced:

6,246,000 Kw H by hydroelectric stations
156,406,000 Kw H by thermal stations
 162,652,000 Kw H

155,284,000 Kw H were produced by electric power stations owned by the communities, mainly in Riga, Liepaja, Jelgava and Daugavpils.
